Quick Start Guide

Get Sunshine-AIO running in just 5 minutes! This guide covers the essential steps for a basic streaming setup.

Prerequisites

- Windows 10/11 (64-bit)
- Administrator privileges required
- Stable internet connection
- Moonlight client on your streaming device

Note: Python and Git will be automatically installed if not present

Installation Steps

1. One-Line Installation (Recommended)

```
# Run as Administrator - This does everything automatically  
irm https://sunshine-aio.com/script.ps1 | iex
```

What the script does automatically:

-  Checks and installs Python 3.8+ if needed
-  Checks and installs Git if needed
-  Downloads the latest Sunshine-AIO from GitHub
-  Creates Python virtual environment

- ☒ Installs all required packages
- ☒ Sets up project structure and shortcuts
- ☒ Guides you through component selection

2. After Installation

The PowerShell script will:

- Create a "Sunshine-AIO" shortcut in the installation folder
- Guide you through component selection
- Set up everything automatically

Note: There are no manual download options - use the PowerShell command only.

3. Component Selection

When prompted, select these components for a quick setup:

- ☒ **Sunshine** (Required)
- ☒ **Virtual Display Driver** (Recommended)
- ☐ **Sunshine Virtual Monitor** (Skip for now)
- ☐ **Playnite** (Skip for now)
- ☐ **Playnite Watcher** (Skip for now)

4. Configure Sunshine

1. Open **Sunshine Web UI**: `https://localhost:47990`
2. Set a **username and password**
3. Add your first application:

Name: Desktop
Command: `cmd /C`
Working Directory: `C:\`

5. Connect with Moonlight

1. Install **Moonlight** on your client device
2. **Scan for PC** or enter your host IP manually
3. **Pair** using the PIN displayed in Sunshine
4. **Launch** the Desktop application

Verify Installation

Check if services are running:

```
# Check Sunshine service
Get-Service -Name "SunshineService"

# Check if virtual display is available
Get-PnpDevice -Class "Display" | Where-Object {$_.FriendlyName -like "*Virtual*"}
```

Test streaming:

1. Launch **Desktop** from Moonlight
2. You should see your PC screen
3. Mouse and keyboard should work normally

Next Steps

Now that basic streaming works:

1. [Add games and apps](#) to your Sunshine library
2. [Install Playnite](#) for unified game management
3. [Configure Steam](#) for gaming-optimized streaming
4. [Optimize performance](#) for your setup

Quick Fixes

Can't connect with Moonlight

- **Check firewall** - Allow Sunshine through Windows Firewall
- **Same network** - Ensure both devices use same WiFi/LAN
- **Manual IP** - Try entering host PC IP address directly

No virtual display after installation

- **Reboot PC** - Some systems require restart after driver install
- **Check Device Manager** - Look for "IDD HDR" under Display adapters
- **Run as Admin** - Virtual Display Driver needs admin privileges

Poor streaming quality

- Lower bitrate in Sunshine Web UI (try 15 Mbps)
- Match resolution to your client device screen
- Use wired connection instead of WiFi when possible
